

Victor Chukwudi Ezenwa

Software Engineer | Agentic Search Systems

Nigeria +234 816 223 8752 ezenwavictor788@gmail.com LinkedIn GitHub / vickman787 Portfolio

Software engineer focused on AI-powered research systems, agentic workflows, semantic retrieval, and reliable API integrations. Builds practical systems that connect grounded answers, source attribution, and machine-to-machine payments.

EXPERIENCE

Founder & Software Engineer, CiteFlowAI

Independent project | Arc Testnet | 2026 - Present

- Built a Web3-native AI research agent that generates grounded answers from registered, ownership-verified sources.
- Designed a retrieval-augmented generation pipeline using embeddings and semantic similarity search to identify relevant source content.
- Developed the agent orchestration flow for source evaluation, citation selection, structured responses, and research ledger updates.
- Implemented a USDC pay-per-citation model that compensates creators when their work contributes to an answer and refunds unused user budget.
- Integrated Circle Wallets for email-based onboarding, x402 for agent-payable HTTP research, and Circle Gateway for gasless batched payments.
- Created an MCP server exposing a `citeflow_research` tool for compatible AI clients and coding agents.
- Added ownership verification, server-side payment validation, replay protection, authenticated routes, and safeguards against unauthorized research execution.
- Tested agent-payment workflows with Circle Agent Wallet, Claude, Codex, Google Antigravity, MCP clients, and direct terminal scripts; the live system has served 101 answers, indexed 19 sources, and paid \$15.78 USDC to creators.

ENGINEERING FOCUS

- Agentic search and retrieval quality
- LLM orchestration and structured outputs
- Tool-using agents and machine-to-machine APIs
- Source attribution and trustworthy AI systems

References and additional project details available upon request.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, REST APIs, server-side application logic

AI: RAG, embeddings, semantic search, LLM orchestration, model fallbacks

Data: Supabase, PostgreSQL, pgvector, database policies, RLS

Agents: MCP, x402, Circle Agent Wallets, Circle Gateway

Payments: Arc Testnet, USDC, Circle Wallets, gasless nanopayments

Engineering: Git, API integration, authentication, payment verification, debugging

EDUCATION

Bachelor of Engineering

Enugu State University of Science and Technology
Nigeria | 2017 - 2022

LANGUAGES

English
Igbo
